12.	PTO/SB/08) Paper No(s)						
	/Sikha Roy/ Primary Examiner, Art U	nit 2879					

Continuation of 11. does NOT place the application in condition for allowance because: 1. Applicant's arguments filed 01/16/2009 has been fully considered but they are not persuasive. Applicant first asserts that the secondary reference of Tsutomu is non-analogous art and one of ordinary skill would have no reason to look at this reference to modify the primary reference as presented by the examiner. The examiner respectfully disagrees with the applicant on Page 3, paragraph 7, the applicant discloses that the alkali generating agent is used for secondary emission. In the Tsutomu reference, the material containing alkali is used as an electron emission material. Even though, they are used in different devices one active and the other being passive, one of ordinary skill in the art could use the teachings of Tsutomu to come up with the compound disclosed by the applicant. The applicant's photocathode and the flash discharge both resolve the same issue dealing with their devices, the one of electron emission.

Applican further submitted graphs and charts to demonstrate an improved device. Examiner appreciates the disclosure however, the reference as sited and claimed is still rendered obvious by the combination of devices despite their usage both deal with electron emission. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See In re Fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, as asserted above photocathodes, photomultipliers depend upon electron emission to function properly and so do discharge tubes. Applicant seems to focus on Tsutomu as a primary reference when it is secondary to Yorikatsu. As the applicant asserted the negative pole (cathode) of Tsutomu was formed out of this material, but the applicant failed to point out as in Paragraphs 7-10 of the Tsutomu reference that this material is formed such that a more stable electron emitter is formed Regardless of oxidation-reduction or applying voltage to generate electron emission, the reference still teaches on the composition of the material alkali material as a electron emitter.

Examiner believes that prima facie case of obviousness has been demonstrated and that all rejections are proper..
